

**NOTE**  
 THE DOUBLE TEE WILL HAVE POSITIVE CAMBER, A VERTICAL DEFLECTION ALONG THE LENGTH OF THE DOUBLE TEE, AT THE TIME OF ERECTION. IN ADDITION, THE BOTTOM OF THE DOUBLE TEE WILL MOVE CONTINUALLY DUE TO TEMPERATURE CHANGE, CREEP AND VARIATIONS IN APPLIED LIVE LOAD. DUE TO THIS, THE BOTTOM OF THE DOUBLE TEE WILL NOT BE PARALLEL WITH THE TOP OF THE CAST-IN-PLACE WALL. THIS MAY BE OBJECTIONABLE IN APPEARANCE AND SHOULD BE CONSIDERED AT THE TIME OF DESIGN.

ISSUED MAY 2015  
 REVISED

DOUBLE TEE BRACING A MASONRY WALL PARALLEL TO DOUBLE TEE LEG

**DT-17**
